The University of Arizona Global Health course, begun in 1982 and extensively revised annually, is a small group, problem-solving course with a multidisciplinary clinical emphasis unique among North American global health courses. Unlike web-based courses you are immersed daily with diverse colleagues passionate about global service.

Many of the 700 alumni (as of August 2015) work in global health or underserved areas. Several are full time clinicians with NGOs, including FBOs. Our alumni work with USAID, CDC, UNICEF, Partners in Health, Clinton and Gates Foundations, DGH, MSF, Indian Health Service, and in faculty positions at various universities in North America and abroad.
